1 Introduction

This is a mock LaTeX document to test your Neovim configuration. LaTeX is excellent for typesetting mathematical equations, such as the Gaussian distribution:

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{1}{2}\left(\frac{x-\mu}{\sigma}\right)^2} \quad (1)$$

2 Methodology

To compile this, ensure you have `latexmk` installed. You can literature using BibTeX [?].

Table 1: Example Table

Variable	Value
α	0.05
β	0.10

3 Conclusion

If this document compiles into a PDF via your Neovim setup, your environment is correctly configured.
